SweetNavBar

A custom floating bottom navigation bar with smooth icon switching, optional labels, rounded corners, shadows, and **fixed height support**.

✨Features

- Fixed height navigation bar
- Active / inactive icon support
- Optional labels per item
- Custom background color
- Custom border radius
- Custom box shadow
- SafeArea aware (bottom)

🦏Constructor

```
SweetNavBar({
  required int currentIndex,
  required List<SweetNavBarItem> items,
  required double height,
  ValueChanged<int>? onTap,
  double borderRadius = 30,
  Color backgroundColor = Colors.white,
  List<BoxShadow>? boxShadow,
})
```

🦝Parameters

Parameter	Type	Required	Description
`currentIndex`	`int`	✅	Currently selected index
`items`	`List<SweetNavBarItem>`	✅	Navigation items
`height`	`double`	✅	**Fixed height of the navbar**
`onTap`	`ValueChanged<int>`	❌	Callback on item tap
`borderRadius`	`double`	❌	Corner radius

Parameter	Type	Required	Description
`backgroundColor`	`Color`	❌	Background color
`boxShadow`	`List<BoxShadow>`	❌	Shadow configuration

🍂 SweetNavBarItem

```dart
class SweetNavBarItem {
  final Widget icon;
  final Widget? activeIcon;
  final String? label;

  const SweetNavBarItem({
    required this.icon,
    this.activeIcon,
    this.label,
  });
}
```

🍁 Example Usage

```dart
SweetNavBar(
  currentIndex: _selectedIndex,
  height: 70,
  borderRadius: 40,
  backgroundColor: Colors.white,
  onTap: (index) {
    setState(() => _selectedIndex = index);
  },
  items: const [
    SweetNavBarItem(icon: Icon(Icons.home), label: 'Home'),
    SweetNavBarItem(icon: Icon(Icons.article), label: 'Resume'),
    SweetNavBarItem(icon: Icon(Icons.layers), label: 'Templates'),
    SweetNavBarItem(icon: Icon(Icons.settings), label: 'Settings'),
  ],
)
```

🦤 Full Source Code

```dart
import 'package:isaacmwesigw352/constants/common_imports.dart';

class SweetNavBar extends StatelessWidget {
  final int currentIndex;
  final ValueChanged<int>? onTap;
  final List<SweetNavBarItem> items;

  final double height;
  final double borderRadius;
  final Color backgroundColor;
  final List<BoxShadow>? boxShadow;

  const SweetNavBar({
    super.key,
    required this.currentIndex,
    required this.items,
    required this.height,
    this.onTap,
    this.borderRadius = 30,
    this.backgroundColor = Colors.white,
    this.boxShadow,
  });

  @override
  Widget build(BuildContext context) {
    return SafeArea(
      top: false,
      bottom: true,
      child: Container(
        height: height,
        padding: const EdgeInsets.symmetric(horizontal: 16),
        decoration: BoxDecoration(
          color: backgroundColor,
          borderRadius: BorderRadius.circular(borderRadius),
          boxShadow: boxShadow ??
              [
                BoxShadow(
                  color: Colors.black.withAlpha(20),
                  blurRadius: 10,
                  offset: const Offset(0, 5),
                ),
              ],
        ),
        child: Row(
```

```
          mainAxisAlignment: MainAxisAlignment.spaceAround,
          children: List.generate(items.length, (index) {
            final item = items[index];
            final isSelected = index == currentIndex;

            return InkWell(
              onTap: () => onTap?.call(index),
              borderRadius: BorderRadius.circular(24),
              child: Column(
                mainAxisAlignment: MainAxisAlignment.center,
                mainAxisSize: MainAxisSize.min,
                children: [
                  SizedBox(
                    height: 28,
                    width: 28,
                    child: isSelected
                        ? item.activeIcon ?? item.icon
                        : item.icon,
                  ),
                  if (item.label != null) ...[
                    const SizedBox(height: 4),
                    Text(
                      item.label!,
                      style: TextStyle(
                        fontSize: 12,
                        fontWeight:
                            isSelected ? FontWeight.w600 : FontWeight.normal,
                        color: isSelected ? Colors.blue : Colors.grey,
                      ),
                    ),
                  ]
                ],
              ),
            );
          }),
        ),
      ),
    );
  }
}

class SweetNavBarItem {
  final Widget icon;
  final Widget? activeIcon;
  final String? label;

  const SweetNavBarItem({
    required this.icon,
```

```
    this.activeIcon,
    this.label,
  });
}
```

🦜 Notes

- `height` is **mandatory** and enforced
- The bar remains floating-safe with system navigation bars
- Works perfectly with `Stack + Align.bottomCenter`

If you want **animated indicator**, **bubble effect**, or **glassmorphism**, say the word ☑️
