

Chat List Item Documentation

Overview

This document explains the **Chat list UI** using a simplified version of your code. Only **1-2 chat items** are shown so the structure and logic are easy to understand.

Purpose

- Display a list of chat conversations
 - Show user image, name, last message, and day
 - Indicate whether the message is from **You** or another user
 - Navigate to **Chat Details Screen** when a chat item is tapped
-

Data Model: ChatItem

Below is the **ChatItem model code** used at the top of the file. This model represents **one chat row**.

```
class ChatItem {  
    final String image;  
    final String name;  
    final String message;  
    final String day;  
    final bool isYou;  
    final bool isActive;  
  
    ChatItem({  
        required this.image,  
        required this.name,  
        required this.message,  
        required this.day,  
        this.isYou = false,  
        this.isActive = false,  
    });  
}
```

What this model does

- Holds all data for a single chat item
- Controls message prefix (You / Name)
- Controls online status

image	String	User profile image path	name	String	User name	
message	String	Last chat message	day	String	Day or time label (Today, Yesterday)	
isYou	bool	Checks if message is sent by you	isActive	bool	Online/offline status	

Simplified Chat List Example

Only **two items** are kept here for understanding:

```
List<ChatItem> chatList = [
    ChatItem(
        image: AppImages.jerry,
        name: 'John Doe',
        message: 'Hey! How are you?',
        day: 'Today',
        isActive: true,
    ),
    ChatItem(
        image: AppImages.jerry,
        name: 'Emma Watson',
        message: 'Sure, I will send it',
        day: 'Yesterday',
        isYou: true,
        isActive: false,
    ),
];
```

Chat UI Widget: ChatWidget

Below is the **simplified UI code** using the same structure, but with **only 2 chat items** so you can clearly understand how the UI works.

```
class ChatWidget extends StatelessWidget {
    const ChatWidget({super.key});

    @override
    Widget build(BuildContext context) {
        return ListView.builder(
            itemCount: chatList.length,
            itemBuilder: (context, index) {
                final chat = chatList[index];
```

```

return Padding(
  padding: const EdgeInsets.only(bottom: 16),
  child: InkWell(
    onTap: () {
      NavigationService.navigateToWithArgs(
        Routes.chatDetailsScreen,
        {
          "name": chat.name,
          "image": chat.image,
          "isActive": chat.isActive,
        },
      );
    },
    child: Row(
      children: [
        ClipRRect(
          borderRadius: BorderRadius.circular(100),
          child: Image.asset(
            chat.image,
            height: 48,
            width: 48,
            fit: BoxFit.cover,
          ),
        ),
        const SizedBox(width: 16),
        Expanded(
          child: Column(
            crossAxisAlignment: CrossAxisAlignment.start,
            children: [
              Row(
                mainAxisAlignment: MainAxisAlignment.spaceBetween,
                children: [
                  Text(
                    chat.name,
                    style: const TextStyle(
                      fontSize: 16,
                      fontWeight: FontWeight.bold,
                    ),
                  ),
                ],
              ),
              Text(
                chat.day,
                style: const TextStyle(fontSize: 12),
              ),
            ],
          ),
          const SizedBox(height: 6),
          Text(
            chat.isYou

```

```

                ? 'You: ${chat.message}'
                : '${chat.name}: ${chat.message}',
                maxLines: 1,
                overflow: TextOverflow.ellipsis,
                style: const TextStyle(fontSize: 14),
            ),
        ],
    ),
),
),
),
),
);
},
);
}
}

```

Navigation Logic

When a chat item is tapped, data is passed to the chat details screen:

```

NavigationService.navigateToWithArgs(
  Routes.chatDetailsScreen,
  {
    "name": chat.name,
    "image": chat.image,
    "isActive": chat.isActive,
  },
);

```

This allows the details screen to show: - User name - Profile image - Online status

Message Display Logic

```

chat.isYou
  ? 'You: ${chat.message}'
  : '${chat.name}: ${chat.message}'

```

Behavior

- If `isYou == true` → message starts with **You**:
 - Otherwise → shows sender name
-

UI Structure (Per Chat Item)

- Profile Image (circular)
 - User name + Day (top row)
 - Last message (single line, ellipsis)
-

Key Benefits

- Clean and readable chat UI
 - Easy navigation with arguments
 - Reusable `ChatItem` model
 - Scales easily for real API data
-

Notes

- You can add unread count or active indicator later
 - Works with static data or API response
 - Can be optimized with `ListView.separated`
-

Summary

This chat widget displays conversation previews using a simple model and dynamic list building. Keeping fewer items helps you clearly understand how **data → UI → navigation** works.

You can edit this documentation freely as needed.
