

ProfileDetailsCard Documentation

1. Widget Overview

`ProfileDetailsCard` is a reusable Flutter widget used to display profile or support-related options in a card layout. Each option contains an icon, text, and a right arrow, and supports tap actions.

This widget is suitable for sections like **Support**, **Settings**, **Profile Options**, etc. The title is optional and will only be shown when a non-empty value is provided.

2. ProfileDetailItem Model

`ProfileDetailItem` represents a single row inside the `ProfileDetailsCard`.

Properties

- **iconPath:** String
Path of the icon image shown on the left side.
- **text:** String
Label text for the row.
- **onTap:** VoidCallback?
Optional function triggered when the row is tapped.

Model Definition

```
class ProfileDetailItem {  
  final String iconPath;  
  final String text;  
  final VoidCallback? onTap;  
  
  const ProfileDetailItem({  
    required this.iconPath,  
    required this.text,  
    this.onTap,  
  });  
}
```

3. ProfileDetailsCard Widget

Constructor Parameters

- **title:** String?
Optional title shown at the top of the card.
- **items:** List
List of rows displayed inside the card.

UI Features

- Rounded corners
 - Border with light gray color (AppColors.cDCDEE2)
 - Card background using AppColors.primaryColor
 - Responsive padding using ScreenUtil
 - Clickable rows using InkWell
 - Divider between rows except the last one
 - Right arrow icon for navigation indication
 - Optional title rendering (hidden when null or empty)
-

4. Widget Implementation

```
class ProfileDetailsCard extends StatelessWidget {
  final String? title;
  final List<ProfileDetailItem> items;

  const ProfileDetailsCard({
    super.key,
    this.title,
    required this.items,
  });

  @override
  Widget build(BuildContext context) {
    return Container(
      padding: EdgeInsets.symmetric(vertical: 16.h, horizontal: 16.w),
      decoration: BoxDecoration(
        border: Border.all(width: 1, color: AppColors.cDCDEE2),
        color: AppColors.primaryColor,
        borderRadius: BorderRadius.circular(16),
      ),
      child: Column(
        crossAxisAlignment: CrossAxisAlignment.start,
        children: [
```

```

        if (title != null && title!.isNotEmpty) ...[
        Text(
            title!,
            style: TextStyle.textStyle14w500c7C8493Inter,
        ),
        UIHelper.verticalSpaceSmall,
    ],
    ...List.generate(items.length, (index) {
        final item = items[index];
        final isLast = index == items.length - 1;
        return Column(
            children: [
                InkWell(
                    onTap: item.onTap,
                    child: Row(
                        children: [
                            Image.asset(item.iconPath, height: 30, width: 30),
                            UIHelper.horizontalSpaceSmall,
                            Expanded(
                                child: Text(
                                    item.text,
                                    style: TextStyle.textStyle14w500cTextColorInter,
                                ),
                            ),
                            const Icon(Icons.chevron_right, color: Colors.grey),
                        ],
                    ),
                ),
                if (!isLast) ...[
                    UIHelper.verticalSpaceSmall,
                    UIHelper.customDividerc7C8493(),
                    UIHelper.verticalSpaceSmall,
                ],
            ],
        );
    }
}

```

5. Usage in UI

Example of using `ProfileDetailsCard` inside a screen:

```

ProfileDetailsCard(
  title: 'Support',
  items: [
    ProfileDetailItem(
      iconPath: AppImages.timerIcon,
      text: 'Contact Us',
      onTap: () {
        // handle tap
      },
    ),
    ProfileDetailItem(
      iconPath: AppImages.timerIcon,
      text: 'FAQs',
      onTap: () {
        // handle tap
      },
    ),
  ],
)

```

6. Notes

- The title is optional. It will only be displayed when a non-null and non-empty value is provided.
 - Icons should be properly added to assets and declared in `pubspec.yaml`.
 - You can reuse this widget for different sections by changing the title and items list.
