

ChatBubble Widget Documentation

Overview

`ChatBubble` is a reusable **Flutter StatelessWidget** used to display a single chat message in a chat UI. It automatically aligns and styles the message bubble based on whether the message is sent by the current user or received from others.

Purpose

- Show chat messages in a conversation
 - Align messages to **right (sender)** or **left (receiver)**
 - Apply different colors for sender and receiver messages
 - Keep the UI responsive using `flutter_screenutil`
-

Code

```
class ChatBubble extends StatelessWidget {
  final String message;
  final bool isMe;

  const ChatBubble({
    super.key,
    required this.message,
    required this.isMe,
  });

  @override
  Widget build(BuildContext context) {
    return Align(
      alignment: isMe ? Alignment.centerRight : Alignment.centerLeft,
      child: Container(
        margin: EdgeInsets.symmetric(vertical: 6.h),
        padding: EdgeInsets.all(16.r),
        constraints: BoxConstraints(maxWidth: 267.w),
        decoration: BoxDecoration(
          color: isMe
            ? AppColors.buttonColor
            : AppColors.buttonColor.withAlpha(15),
          borderRadius: BorderRadius.circular(12.r),
        ),
      ),
    );
  }
}
```

```

        child: Text(
          message,
          style: TextStyle.textStyle14w500cTextColorInter.copyWith(
            color: isMe ? AppColors.primaryColor : AppColors.textColor,
          ),
        ),
      ),
    );
  }
}

```

Properties

Property	Type	Description
<code>message</code>	<code>String</code>	The text message to display inside the bubble
<code>isMe</code>	<code>bool</code>	Determines if the message is sent by the current user

UI Behavior

Alignment

- `isMe = true` → Message aligned to the **right**
- `isMe = false` → Message aligned to the **left**

Colors

- **Sender message:** `AppColors.buttonColor`
- **Receiver message:** Light transparent version of `buttonColor`

Styling

- Rounded corners using `BorderRadius.circular(12.r)`
- Maximum width limited to `267.w`
- Responsive padding and margin using `ScreenUtil`

Dependencies Used

- `flutter_screenutil` → Responsive sizing (`.h`, `.w`, `.r`)
- `AppColors` → Centralized color management
- `TextStyle` → Centralized text styling

Example Usage

```
ChatBubble(  
  message: "Hello! How are you?",  
  isMe: true,  
)
```

Notes

- This widget is **fully reusable**
- Best used inside a `ListView` or `Column` for chat screens
- You can easily customize colors, radius, or text style

 You can edit this document anytime to add screenshots, flow diagrams, or extra customization notes.
