

Dropdown Button (UI Part Only)

This document contains **ONLY the dropdown button UI code**, without `Scaffold`, without full screen, and without extra layout. It is made for **easy understanding and future reference**.

What This Is

- Only `DropdownButtonFormField`
- No full page
- No extra widgets
- Focused on **UI + styling**

You can paste this inside **any widget** later.

Dropdown Button UI Code

```
DropdownButtonFormField<String>(  
  initialValue: selectedItem,  
  
  // Text style inside dropdown  
  style: TextStyle.textStyle10cFFFFFFDMSans400.copyWith(  
    color: AppColors.cF5F5F5,  
    fontSize: 20,  
  ),  
  
  // Dropdown menu background color  
  dropdownColor: AppColors.allPrimaryColor,  
  
  // Rounded dropdown menu  
  borderRadius: BorderRadius.circular(12),  
  
  // Input field decoration  
  decoration: InputDecoration(  
    enabledBorder: OutlineInputBorder(  
      borderRadius: BorderRadius.circular(12),  
      borderSide: BorderSide(color: Colors.grey),  
    ),  
    focusedBorder: OutlineInputBorder(  
      borderRadius: BorderRadius.circular(12),  
      borderSide: BorderSide(  
        color: AppColors.allPrimaryColor,  
        width: 2,  

```

```

    ),
  ),
),

// Dropdown items
items: items.map((item) {
  return DropdownMenuItem<String>(
    value: item,
    child: Text(item),
  );
}).toList(),

// Value change handler
onChanged: (value) {
  setState(() {
    selectedItem = value;
  });
},
)

```

Key Things to Remember

`initialValue`

`initialValue: selectedItem`

- Must exist in the `items` list

Text Style

Controls font size & color of selected item

Borders

- `enabledBorder` → always visible
- `focusedBorder` → when tapped

Items List

```
items.map((item) => DropdownMenuItem(...))
```

Converts list values into dropdown options

onChanged

```
setState() {  
    selectedItem = value;  
});
```

Updates selected value

When You Use It Later

You only need: - `List<String> items` - `String? selectedItem`

And paste this dropdown UI inside any widget.

Summary

✓ Clean UI-only dropdown code ✓ Easy to understand later ✓ No screen or layout noise

If later you want: - Stateless version - With hint text - With icon - With validation

You can extend this easily ♀
