

Rating Screen Documentation (Flutter)

Overview

The `RatingScreen` is a Flutter UI screen that allows users to rate a tour experience using a 5-star rating system and provide optional feedback through a comment box. It is designed for travel/tour applications where user reviews are collected after completing a tour.

Features

- Displays tour image, title, and location
 - 5-star interactive rating system
 - Dynamic rating label (Poor → Excellent)
 - Multi-line comment input with character limit
 - Submit button with validation
 - Responsive UI using screen utility sizing (`.w` , `.h` , `.sp`)
-

Screen Inputs

The screen requires the following parameters:

- `tourId` → Unique ID of the tour
 - `tourTitle` → Title of the tour
 - `tourLocation` → Location of the tour
 - `imageUrl` → Tour image URL
-

State Variables

Variable	Type	Description
<code>_selectedRating</code>	int	Stores selected star rating (1-5)
<code>_commentController</code>	TextEditingController	Handles comment input
<code>_maxLength</code>	int	Maximum allowed comment length
<code>_labels</code>	List<String>	Rating descriptions

UI Breakdown

1. App Bar

- Custom AppBar with title: **"Rate your experience"**
-

2. Tour Preview

- Cached network image
 - Rounded corners (12 radius)
 - Displays:
 - Tour image
 - Tour title
 - Tour location
-

3. Star Rating System

- 5 tappable star icons
- Highlights selected rating
- Updates state dynamically using `setState()`

Rating Labels:

- 1 → Poor
 - 2 → Fair
 - 3 → Good
 - 4 → Very good
 - 5 → Excellent
-

4. Comment Section

- Multi-line text input
 - Max length: 300 characters
 - Live update using `onChanged`
 - Styled using `CustomTextfield`
-

5. Submit Button

- Disabled until rating is selected
- On submit:
 - Prints rating and comment
 - Placeholder for API integration

Methods

`_submit()`

Handles review submission.

```
void _submit() {  
  if (_selectedRating == 0) return;  
  debugPrint('Rating: $_selectedRating, Comment: ${_commentController.text}');  
}
```

API Integration Guide (Recommended)

Replace `_submit()` with your backend API call:

```
Future<void> submitReview() async {  
  final body = {  
    "tourId": widget.tourId,  
    "rating": _selectedRating,  
    "comment": _commentController.text,  
  };  
  
  // Call API here  
}
```

Improvements (Optional)

- Add loading indicator during submission
- Show success/error snackbar
- Prevent multiple submissions
- Add emoji reaction based on rating
- Validate minimum comment length

Full Source Code

```
import 'package:thedoctor0101/constants/common_imports.dart';
```

```

class RatingScreen extends StatefulWidget {
  final String tourId;
  final String tourTitle;
  final String tourLocation;
  final String imageUrl;

  const RatingScreen({
    super.key,
    required this.tourId,
    required this.tourTitle,
    required this.tourLocation,
    required this.imageUrl,
  });

  @override
  State<RatingScreen> createState() => _RatingScreenState();
}

class _RatingScreenState extends State<RatingScreen> {
  int _selectedRating = 0;
  final _commentController = TextEditingController();
  final int _maxLength = 300;

  final List<String> _labels = [
    '',
    'Poor',
    'Fair',
    'Good',
    'Very good',
    'Excellent'
  ];

  @override
  void dispose() {
    _commentController.dispose();
    super.dispose();
  }

  void _submit() {
    if (_selectedRating == 0) return;
    debugPrint('Rating: $_selectedRating, Comment: ${_commentController.text}');
  }

  @override
  Widget build(BuildContext context) {
    return Scaffold(
      body: SingleChildScrollView(
        padding: EdgeInsets.all(16.w),

```

```

child: Column(
  crossAxisAlignment: CrossAxisAlignment.start,
  children: [
    UIHelper.verticalSpaceMedium,
    CustomAppBar(title: "Rate your experience"),
    UIHelper.verticalSpaceMedium,

    ClipRRect(
      borderRadius: BorderRadius.circular(12.r),
      child: CachedNetworkImage(
        imageUrl: widget.imageUrl,
        height: 180.h,
        width: double.infinity,
        fit: BoxFit.cover,
      ),
    ),

    SizedBox(height: 12.h),

    Text(widget.tourTitle),
    SizedBox(height: 4.h),
    Text(widget.tourLocation),

    Divider(height: 32.h),

    Text('Your rating'),
    SizedBox(height: 10.h),

    Row(
      children: List.generate(5, (i) {
        final val = i + 1;
        return GestureDetector(
          onTap: () => setState(() => _selectedRating = val),
          child: Icon(
            Icons.star_rounded,
            size: 36.sp,
            color: val <= _selectedRating
              ? const Color(0xFFEF9F27)
              : AppColors.greyLight,
          ),
        );
      })),
    ),

    SizedBox(height: 20.h),

    CustomTextfield(
      hintText: 'Share your experience about the tour...',

```

```

        controller: _commentController,
        maxLength: _maxLength,
        maxline: 6,
        fillColor: AppColors.white,
        onChanged: (_) => setState(() {}),
        borderRadius: 8.r,
    ),

    SizedBox(height: 24.h),

    SizedBox(
      width: double.infinity,
      child: ElevatedButton(
        onPressed: _selectedRating > 0 ? _submit : null,
        child: const Text('Submit review'),
      ),
    ),
  ],
),
);
}
}

```

Notes

- Ensure `CachedNetworkImage` is added in dependencies
- Ensure `flutter_screenutil` is configured for `.w`, `.h`, `.sp`
- Replace `_submit()` with real API integration
